October 10, 2023

Dear Township Resident:

The purpose of this letter is to inform you of our plans to conduct a prescribed ecological burn planned for this fall on the Township & County owned Lake Lansing North Preserve, located at 1000 Wild Ginger Trail, Haslett, MI 48840. More specifically, the burn will be conducted on 27 acres, made up of two parcels bordering the orange and blue trails. The goal of this burn is to support a diversity of native woodland wildflowers and tree species that are fire dependent. Controlled fire opens up the woodland understory to allow more light to promote the growth of species like oak trees and woodland sunflower. This process also boosts their seed production and helps in the spread of these beneficial plants.

If conditions are favorable, the burn will be taking place any time after November 1, 2023 until the end of this year. If conditions are not favorable this fall the burn will commence in the spring of 2024 and be completed by April 7<sup>th</sup>, 2024.

**Residents will be notified over social media and on the Township website 1-2 days before the burn will take place.**

This burn will be safe and carefully controlled by trained personnel with David Borneman, LLC. The Meridian Township Fire Department will be on site to provide aid, if needed.

“Why Burn?” Fire was a regular and frequent component of our landscape here in southern Michigan. Many of our local ecosystems such as prairies, dry oak-hickory woodlands and certain wetlands historically burned frequently. The fire stimulated many of the plant species to grow more vigorously and discouraged others who were not adapted to the heat from the fire. Today, many non-native plant species have invaded our natural fire-adapted ecosystems, decreasing the diversity of native plants and animals. By bringing fire back to these sites we encourage the competitive advantage that native species have evolved with and restore the site to its former ecological health.

The prescribed burn is safe. The burn is done in cooperation and approval of the local fire department, which has issued a permit for this burn to be conducted. The company performing the burn has outlined the weather conditions, personnel, equipment, and other parameters needed for the burn to be conducted safely. Prior to burning, “burn breaks” will be created around the area to be burned to help control the fire. **(Information continues on the next page)**

The burn is done in a slow and deliberate manner, with safety equipment on hand to monitor and control its spread. The burn will also be conducted in such a manner as to minimize the amount of smoke produced and to direct any smoke away from smoke-sensitive areas as much as possible. **Due to the burn being weather-dependent, it is impossible to predict exactly when it will occur, though if conditions are favorable then we will notify homeowners 1-2 days prior to the burn over social media, on our website, and through the constant contact email list.**

**If you have any questions, concerns, or if you have any special needs that require you to be notified by phone on the day of the burn, you may contact me at 517-853-4614 or, [ecampbell@meridian.mi.us](mailto:ecampbell@meridian.mi.us).**

(Above is an aerial map of the burn units which are in yellow)

Sincerely,

Emma Campbell
